WELCOME

This handbook is designed as a guide to policies and practices pertaining to graduate study in our department. Our intent is to maximize information and minimize anxiety by laying out answers to frequently asked questions, as well as to address important issues that might not otherwise occur to you. It has some of the features of a road map, a contract, and a user's manual. We have recently revised this guide to provide updated information and to clarify various points about the program. We urge you, as a user of this handbook, to make suggestions for improvement if you discover omissions, contradictions, or other problems.

This handbook supplements the Penn State Graduate Degree Programs Bulletin. If there is a conflict between the Graduate School and departmental rules, the Graduate School rules take precedence. Likewise, changes in Graduate School rules make it necessary to alter some departmental rules on short notice. If there are ambiguities in the department rules, the Graduate Studies Committee, in consultation with the faculty, will determine the proper interpretation. You are responsible for being acquainted with the contents of both sources. Read this manual thoughtfully at the beginning of your graduate school career and you will save yourself some headaches later on.

Entering graduate students are on their way to professional careers, and in the process, they make a transition from student to colleague, a remarkable metamorphosis. The successful development of a graduate career depends upon your ability to establish and maintain a professional relationship with one or more faculty mentors. Subsequent professional success will depend upon your ability to conduct original and meaningful research, to teach, and to interact with colleagues. The faculty are committed to helping graduate students to develop professionally because their reputations and that of the department depend on the reputations of the students who graduate from our program. So, it is in everyone's interest that the highest standards of performance and integrity be upheld in the classroom, the field, and the laboratory. These concerns ensure that your individual progress and development as a scholar and colleague will be followed closely.

The department offers the M.A. and Ph.D. degrees in anthropology. Students, however, normally enter the graduate program with the goal of receiving the Ph.D. The M.A. is a prerequisite for the Ph.D., and it is normally not an end in itself for our students. Students also have the option of being part of several dual-degree programs described briefly in this handbook. Finally, Penn State undergraduates enrolled in the Integrated Undergraduate/Graduate Program (IUG) can earn their anthropology M.A. degree alongside their B.A. or B.S. degree.

The Penn State graduate program in anthropology is one of the most selective programs anywhere, and our ranking in national surveys is far above those of comparable size. It is a program in which both faculty and students can reasonably expect to maintain high standards for themselves and each other. Our department is distinguished by a high degree of cooperation, mutual respect, and confidence. It is a wonderfully friendly and intellectually stimulating place to study, grow, and work.

Welcome into this shared endeavor, and may you enjoy rapid and distinguished success in your graduate studies!

Mary Shenk,
Director of Graduate Studies

ADVISERS

A student enters the program with an assigned adviser. This assignment is based on expressed interest on the part of the student or adviser during the application process. This original assignment may be changed as necessary. As you progress through the program, you should be aware of the importance of maintaining close contact with your adviser. You should consult your adviser in selecting courses and important milestones in your program such as the scheduling of candidacy or comprehensive exams, filing of forms, activating your intent to graduate on e-lion, selecting an M.A. paper topic, completing the M.A. paper, selecting a Ph.D. proposal topic, and forming the Ph.D. Committee, etc. Any time your adviser changes for any reason, you must notify the department in writing and indicate who has consented to serve as your adviser. This notification must be signed by your new adviser and placed in your file. Similarly, you should get the signature of your adviser on any notifications or petitions to the Graduate Studies Committee that you initiate. The Graduate Studies Committee and the Director of Graduate Studies (DGS) oversee the progress of all students.

GRADUATE STUDIES COMMITTEE

The Graduate Studies Committee is composed of the Head of the Department (ex officio), the Director of Graduate Studies (DGS), and a minimum of three additional faculty members. The Graduate Studies Committee, in consultation, as appropriate, with the faculty, has the power to waive or alter departmental rules when circumstances dictate, providing that proper procedures are followed. Such modifications do not constitute precedents for other students, but instead are tailored to individual needs. The Graduate Studies Committee functions include monitoring student progress, issuing periodic audits, formally acknowledging various stages in the graduate career (e.g., advancement to candidacy), granting permission for certain actions (e.g., course substitution), interpreting departmental rules, hearing student appeals, and recommending certain kinds of support. The Graduate Studies Committee has the power to administer only departmental rules. It cannot alter the rules of the Graduate School.

Please note that material such as this Handbook may inadvertently have contents that can appear ambiguous or that are intentionally left as a matter of judgment. It is also possible that there are technical errors in the Handbook. In matters of this sort, the Graduate Studies Committee will interpret and adjudicate.

ADMISSION TO GRADUATE STUDY

To be admitted to the graduate program, you must have completed a bachelor's degree by the first day of the semester in which you intend to begin graduate study.

The Graduate Studies Committee may require individuals who are admitted to the program without having what the Graduate Studies Committee judges to be a sufficient anthropology background to make up the deficiency, typically by taking specified courses.

The Graduate School sets a limit of ten credits of graduate work from other institutions that may be transferred to apply toward the M.A. degree at Penn State. The Graduate Studies Committee decides what work will be accepted for credit.

COURSE REQUIREMENTS

A full course load is 12–15 credits per semester, or 9–12 credits per semester if the student is on an assistantship. These courses must be at the 400 level or higher.

All first-year PhD students are required to take the three core seminars (ANTH 560 Ecology, Evolution, and Human Behavior, ANTH 571 Principles of Human Evolutionary Biology, and ANTH 588 Method and Theory in Archaeology) for a total of nine credits during the first year of study, typically in the fall semester. In the spring of the first year, students will be required to take ANTH 572 Advances in Anthropological Methods and ANTH 573 Anthropology Research Practicum. The core method and theory courses will serve as the basis for the candidacy exam, which will take place at the end of the first year for all Ph.D. students. In the fall of the second year, all students in the Ph.D. program who have advanced to candidacy are required to take ANTH 509-Proposal Writing. The research proposal required in ANTH 509 may form the basis for the dissertation proposal. ANTH 508 Visualizing Anthropological Data, is required for all PhD students and may be taken at any point in the first two years. Students without suitable preparation in statistics may also be required to take a course at the 400 or 500 level at the advisor's discretion. At any point during the first three years, students may be required to take up to 6 additional credits of advanced seminars, as directed by their advisor.

All Masters and Ph.D. students are required to enroll in a one-credit literature review seminar (ANTH 541 Current Literature in Integrative Anthropology), each semester during the first six semesters of study (2 for Master's students). These seminars, which are also known as "journal clubs," meet each week and are attended by faculty and the graduate students for the purpose of reviewing and discussing current articles published in key journals or recent books. While in residence, all students are expected to participate regularly in the departmental Colloquium.

Scholarship and Research Integrity (SARI) Requirement

All entering graduate students are expected to complete online training in Scholarship and Research Integrity (SARI), also referred to as Responsible Conduct of Research (RCR), by no later than October 1 of their first semester in residence. The Office for Research Protections (ORP) provides the link to this training via the SARI Resource Portal on the ORP website (www.research.psu.edu/orp). All students will be expected to complete all remaining SARI requirements during the M.A. portion of the Ph.D. program (the first two years).

- A. All required RCR education beyond the online component will be obtained from required coursework. All students are required to take a current literature seminar during the course of each of at least the first six semesters of study (two for masters). Each current literature seminar is worth one credit and generally meets once a week for one hour per meeting. A minimum of one class meeting will be dedicated to RCR education in each current

literature seminar every semester providing at least six hours (2 for masters) in this setting. In addition, all Ph.D. students are required to take ANTH 509, the study design course, during the second year of study. A minimum of one class meeting (1 1/2 hours) will be dedicated to RCR education in this course because ethical issues must be dealt with in research studies. Students can also receive up to two hours of discussion credit from other RCR-related workshops or credit for participating in classes dedicated to relevant issues, if discussion was involved and they obtain faculty confirmation of their attendance in the class. (See Appendix A)

Independent Study Courses

Students may register for independent study courses (ANTH 596) as part of their graduate work. This can include three credits of ANTH 596 during preparation of the master's paper.

You must consult with your adviser about all course decisions. Enrollment in ANTH 596 (Individual Research) may require approval of the Graduate Studies Committee. You cannot count more than 18 credits from ANTH 596 during the M.A./Ph.D. program. Forms to request permission to register for ANTH 596 are available from the graduate program assistant. These forms must be submitted by the fourth week of the semester and must carry the signature of the faculty member who is supervising the course work.

Core Course Grading

Students must earn a grade of "B" or better in each core course. Core courses normally may be taken only once, unless the Graduate Studies Committee approves your petition to take one a second time. Failure to achieve a grade of "B" or better in any of the core courses (or any courses approved by the Graduate Studies Committee as a substitute) constitutes grounds for automatic dismissal from the program.

If extenuating circumstances prevent the student from achieving satisfactory performance in a core course, then the student should notify the professor teaching the course prior to receiving the final grade. The student may then, with the professor's endorsement, petition the Graduate Studies Committee for permission to retake the course.

A student who follows the course of study described here will accumulate a minimum of ten credits each semester: nine credits from appropriate 400- and 500-level courses and one credit from the current literature seminar.

Students should have completed all required coursework by the end of the second year. The comprehensive exam/proposal defense is generally scheduled for the end of the spring semester in the second year, or no later than the beginning of the Fall semester in the third year.

M.A. DEGREE

The master's degree program serves two functions:

1. It is a professional degree that prepares students for certain careers in the U.S. and to conduct field research in certain countries outside of the U.S.
2. It is a terminal degree granted to Integrated Undergraduate/Graduate (IUG) students and to students who do not continue for the doctorate.

The department is reluctant to admit students to the graduate program who wish to pursue only a terminal M.A. degree (other than IUG students). The Graduate Studies Committee may admit people who have established careers and wish to complete an M.A. in anthropology as an enhancement or adjunct to their other professional skills.

Penn State's Graduate School does not require a student to obtain a master's degree before completing a doctoral degree; however, some PhD students may choose to obtain a master's degree. In order for this process to be activated, the graduate program assistant must be notified early in the semester in which the student wishes to complete the M.A, generally at the end of the second year. The graduate program assistant will then notify the Graduate School. They note it in the student's record, and the student is then added to the master's graduation list for that semester. In addition to passing the candidacy exam at the end of the first year, and completing all required coursework, students may also complete a Master's thesis. Students writing a thesis must follow all Graduate School Thesis Office deadlines for that semester.

The student must also activate his/her intent to graduate for the semester he or she plans to complete the master's degree.

Required coursework prior to being awarded an M.A. degree

Requirements listed here are in addition to requirements stated in the [DEGREE REQUIREMENTS section of the Graduate Bulletin](#).

A minimum of 30 credits at the 400, 500, 600, or 800 level is required, with at least 18 credits at the 500 and 600 level, combined. All Master's students are required to take the three core theory seminars (ANTH 560 Ecology Evolution and Human Behavior, ANTH 571 Principles of Human Evolutionary Biology, ANTH 588 Method and Theory in Archaeology) for a total of nine credits. Students are also required to enroll in the literature review seminar (ANTH 541), for a total of 2 credits. Students can choose to complete a thesis or a scholarly paper as the culminating experience for the degree. Students who choose to complete a thesis must take a minimum of 6 thesis research credits (ANTH 600 or 610). The thesis must be accepted by the advisers and/or committee members, the head of the graduate program, and the Graduate School. Students in the non-thesis track must complete 18 credits at the 500 level, and must write a satisfactory scholarly paper, while enrolled in ANTH 596. All entering graduate students are also expected to complete online training in Scholarship and Research Integrity (SARI), also referred to as Responsible Conduct of Research (RCR), by no later than October 1 of their first semester in residence.

Additional course work is tailored to the student's research interests after advance consultation with their adviser, and specific courses may be required by the adviser depending on the student's background and research plans.

Courses offered by other departments that are considered by the adviser to be essential for a particular student may be substituted with the approval of the Graduate Studies Committee.

M.A. Research Paper/Thesis

Most students (other than IUG students) who enter the graduate program in anthropology do not plan to write a master's thesis as part of the required M.A. A master's thesis is not required by the Graduate School, but it is strongly recommended for those who do not continue on in the doctoral program because of career choices. Students who wish to submit a M.A. thesis must notify the graduate program assistant during the first week of the semester in which they plan to graduate. They must also consult graduate school requirements for the M.A. thesis as stipulated in the *Graduate Bulletin*, found online at <http://bulletins.psu.edu/bulletins/whitebook/index.cfm>. A student writing a thesis MUST be registered for at least six ANTH 600 research credits. Candidates who do not write a M.A. thesis can present a suitable master's paper, the nature and extent of which will be determined by you and your adviser. The paper must pertain to the subject matter of the student's specialty. Notification that the student has met all the requirements for the M.A. degree will be sent to the Graduate School by the DGS.

The master's paper requirement will be considered to be satisfied when your adviser:

1. Forwards the finished document for placement in your file to the department's graduate officer and
2. States in a memorandum to the Graduate Studies Committee that the paper represents satisfactory work and is submitted in partial fulfillment of the requirements for the M.A. degree.

INTEGRATED UNDERGRADUATE/GRADUATE PROGRAMS (IUGs)

The Schreyer IUG

SHC offers an IUG program that is designed to allow exceptional undergraduate students in the SHC to complete bachelor's and master's degrees simultaneously in five years. Details of this program, including instructions for applying through SHC, can be found online at <https://www.shc.psu.edu/academic/resources/iug.cfm>. Students may apply to this program in their fourth, fifth, or sixth semesters of study. Prior to applying, students are expected to have identified a faculty member in Anthropology who will serve as their graduate mentor and to have discussed their plans with their proposed mentor and with the Department Honors Adviser. To be considered for the IUG program, students must be in good standing in SHC with a minimum cumulative GPA of 3.40. Application materials and procedures must be submitted or satisfied according to the stipulated schedule each year.

The requirements for completing the IUG program include maintaining a GPA of at least 3.40, successfully completing all required coursework at both undergraduate and graduate levels, completing a thesis by the end of the fifth year of your undergraduate degree and following both the Graduate School AND Schreyer Honors Thesis Office deadlines. (See Appendix B)

The required coursework for this IUG M.A. includes:

A minimum of 30 credits at the 400, 500, 600, or 800 level is required, with at least 18 credits at the 500 and 600 level, combined. All Master's students are required to take the three core theory seminars (ANTH 560 Ecology Evolution and Human Behavior, ANTH 571 Principles of Human Evolutionary Biology, ANTH 588 Method and Theory in Archaeology) for a total of nine credits. Students are also required to enroll in the literature review seminar (ANTH 541), for a total of 2 credits. Students can choose to complete a thesis or a scholarly paper as the culminating experience for the degree. Students who choose to complete a thesis must take a minimum of 6 thesis research credits (ANTH 600 or 610). The thesis must be accepted by the advisers and/or committee members, the head of the graduate program, and the Graduate School. Students in the non-thesis track must complete 18 credits at the 500 level, and must write a satisfactory scholarly paper, while enrolled in ANTH 596. All entering graduate students are also expected to complete online training in Scholarship and Research Integrity (SARI), also referred to as Responsible Conduct of Research (RCR), by no later than October 1 of their first semester in residence.

Additional course work is tailored to the student's research interests after advance consultation with their adviser, and specific courses may be required by the adviser depending on the student's background and research plans.

Anthropology/CAMS IUG

The Department of Anthropology offers integrated undergraduate-graduate (IUG) degree programs (B.A./B.A./M.A. or B.A./B.S./M.A.) designed to allow academically superior students to obtain either a B.A. degree in Anthropology or a B.S. degree in Anthropological Science with an Archaeological Science option, a B.A. degree in Classics and Ancient Mediterranean Studies (CAMS) with an Ancient Mediterranean Archaeology option, and an M.A. degree in Anthropology in five years of study.

Students must fulfill all requirements for each degree in order to be awarded that degree, subject to the double-counting of credits as outlined below. Degree requirements for the B.A. in Anthropology, B.A. in Classics and Ancient Mediterranean Studies, and B.S. in Anthropological Science are listed in the [Undergraduate Bulletin](#). Degree requirements for the M.A. degree are listed below. Up to 12 credits may be double-counted towards the degree requirements for both the graduate and undergraduate degrees; a minimum of 50% of the double-counted courses must be at the 500 or 800 level. Credits associated with the culminating experience for the graduate degree cannot be double-counted.

The courses that are eligible to double count for both degrees are: ANTH 541, ANTH 560, ANTH 571, and ANTH 588.

The MA degree consists of 30 additional credits of 400-600 level archaeology courses beyond the undergraduate programs.

- ANTH 560, 571, 588, and 2 credits in ANTH 541
- 4 required credits in ANTH 494 or CAMS 494
- 9 required credits in ANTH 573, 594, ANTH 596, ANTH 599, CAMS 592, CAMS 593, or CAMS 596
- A Master's thesis, including 6 credits of ANTH 600 Thesis Research or scholarly paper, including 6 credits of ANTH 596

Students must sequence their courses so all undergraduate degree requirements are fulfilled before taking courses to count towards the graduate degree. If students accepted into the IUG program are unable to complete the M.A. degree, they are still eligible to receive their undergraduate degree if all the undergraduate degree requirements have been satisfied.

The scheduling of these courses requires students to construct a Plan of Study as part of the admission process. The plan should cover the entire time period of the integrated program, and it should be reviewed periodically with an adviser.

At the time of admission and throughout their time in the program, each student will have co-advisors, one from Anthropology and the other from CAMS. Depending on the student's interest, one of these faculty members will serve as the student's primary adviser. Additional details of this program can be found on our website at <http://anth.la.psu.edu/undergraduate/integrated-undergraduate-graduate-iug-programs/anthro-cams-iug-program>.

Students in both programs must enroll in a journal club in every semester after they have been accepted to the BA/MA program. Also, if stipulated courses required for the MA are not offered during their expected time in the program, they must petition the GAC for permission to make substitutions.

Students in both IUG Programs should acquaint themselves with the general content of this handbook.

CANDIDACY EXAM

A candidacy exam is given near the end of the second semester of residence and is required of all students in the Ph.D. graduate program. Scheduling is determined by arrangement with the DGS and appropriate faculty members.

If the student is pursuing a dual-title degree, a single candidacy examination will be administered that contains elements of both the major program and the dual-title program. A faculty member representing the dual-title program must read and grade the candidacy exam. The student must have satisfactorily passed both fields to be certified as passed candidacy.

The candidacy exam is structured around the material presented in the first year core courses, including the literature review courses. The reading list will include all readings in required

courses during the first year and may include additional readings at the advisor's discretion. The reading list will then be used by the committee to form the candidacy exam.

You must be registered as a full-time or part-time degree student for the semester in which you take the candidacy examination. In addition, you cannot have any deferred or missing grades.

You must use a departmental computer to take the candidacy exam. The Graduate Studies Committee and DGS will determine the room used for the examination and you cannot bring any personal computers, electronic devices with Internet connections, or cellphones in to the room. At the end of each day of the examination, you will submit an electronic version of your answers to the graduate program assistant who will distribute them to the examining faculty and retain a copy of the exam in the departmental file.

Candidacy Exam Format

Candidacy examinations are not narrowly tailored to the interests of students (as are comprehensive exams), but rather to the expectations of the faculty about what must be mastered.

Examinations also test the ability to think about the material in a manner appropriate for a researcher aiming to make original contributions to knowledge. As befitting our cross-cutting and synthesizing approach to anthropology, candidacy exams reflect this integration. Students may be asked questions about human demography, biochemical or genetic analysis, the origins of agriculture, human behavior, or how demographic processes influence evolution. Any topic covered in literature review course or in the core courses, including the methods and research practicum, can appear on the candidacy exam.

Candidacy Exam Grading

The written portion of the examination will be printed or sent digitally to the faculty and the student's name will not appear on it. The examination will be graded by at least four members of the graduate faculty. They will assign to each answer one of the following numerical grades (fractional grades can be used as appropriate):

Distinguished performance:	Grade of 4
Adequate performance:	Grade of 3
Unacceptable performance:	Grade of 2
Unacceptable performance:	Grade of 1
Unacceptable performance:	Grade of 0

The grade assigned by a reader to each question applies to that question only. The final grade for the written examination will be determined by averaging the grades given by the graders.

The names of the readers of each examination will be provided to the student after the examination has been graded. Each student is encouraged to discuss his or her performance with the readers.

The results will depend on the overall examination grades as follows:

Grade of 3.5 or better: passed with distinction

Grade of 3.0 but less than 3.5: passed

Grade of 2.5 but less than 3.0: failed

If the grade is between 2.5 and 3.0, you may retake the exam at the beginning of the fall semester of your second year, but you cannot receive financial support for that year until you pass the candidacy exam. If the grades on the first and second exams are both below 3.0, you can complete a terminal master's degree.

A grade below 2.5 is a failing grade. Students whose grade on the exam is less than 2.5 will not be permitted to retake the exam and will be dropped from the program without a master's degree.

Advancement to Doctoral Candidacy

The candidacy examination clears the student for advancement to candidacy in the doctoral program. Advancement to candidacy is dependent upon successful completion of the following:

1. First year core courses completed with a minimum grade of B in each course, and a total of 30 credits.
2. Candidacy examination with an overall grade of at least 3.0.
3. Identification of a core faculty for the Ph.D. committee and a signed doctoral committee form with a designated chair of the student's Ph.D. committee.

PH.D. DEGREE

The Ph.D. degree is awarded to a student who demonstrates:

1. Thorough knowledge of his or her specialty, as evidenced by successful performance in the doctoral comprehensive examination.
2. The ability to plan and conduct a program of meaningful and independent research.
3. The ability to present its results as an acceptable doctoral dissertation or as a series of three or more published or publishable papers.

The doctoral program is more extensive than the master's program, but it is considerably more flexible and closely tailored to the student's specialized interests.

Doctoral Degree Requirements

Requirements listed here are in addition to requirements stated in the [DEGREE REQUIREMENTS section of the Graduate Bulletin](#).

The requirements for the Ph.D. are:

1. Successful completion of the candidacy exam and all required courses
2. Completion of Penn State's two-semester residency requirement;
3. Completion of Penn State's SARI requirement
4. Successful completion of a comprehensive exam/proposal defense
5. Successful completion of a defense of the doctoral dissertation; and
6. Submission of dissertation in accordance with Penn State's Thesis Guide to the Thesis Office by the announced deadline for the semester in which the degree will be conferred.

The doctoral degree in Anthropology requires a minimum of 30 credits, 27 of which are required coursework and 3 credits of which are electives. All first-year Ph.D. students are required to register for 9-12 credits per semester and complete 15 credits of course work, including the three core theory seminars (ANTH 560, ANTH 571, ANTH 588) and two research method seminars, ANTH 572 and ANTH 573. The core method and theory courses will serve as the basis for the Ph.D. candidacy exam, which will take place at the end of the first year. In the fall of the second year, all students in the Ph.D. program who have advanced to candidacy should enroll for a total of 9-12 credits per semester, including ANTH 509. ANTH 508, Visualizing Anthropological Data, is required for all Ph.D. students and may be taken at any point in the first two years. Students without suitable preparation in statistics may also be required to take a course at the 400 or 500 level at the adviser's discretion. A student's doctoral committee can require additional course work depending on the student's background and research plans.

All Ph.D. students are required to enroll in a one-unit literature review seminar (ANTH 541), for one credit each semester during the first six semesters of study. A student's doctoral committee can require reading knowledge and/or demonstrated working knowledge of a foreign language, specialized training in linguistics, or training in computer programming languages, depending on the student's research interests. This will be determined shortly after the committee is formed. For the Ph.D. degree, students must conduct significant original research that demonstrates the student's mastery of the field. The Ph.D. requirements include successful completion of coursework as stipulated by the department and doctoral committee, passing the candidacy exam, preparing a dissertation proposal, successfully passing the comprehensive exam/dissertation proposal defense, and writing and defending the subsequent dissertation. The dissertation must be accepted by the doctoral committee, the head of the graduate program, and the Graduate School.

Doctoral Committee

A student should form a doctoral committee immediately or as soon as possible after the candidacy examination. The student then begins preparing for the comprehensive examination. The doctoral committee is appointed through the Office of Graduate Enrollment Services upon recommendation of the head of the major program, and is responsible for:

1. planning and guiding the student's doctoral program;
2. preparing and grading the comprehensive examination; and,
3. supervising and finally judging the acceptability of the dissertation.

A doctoral committee must consist of four or more active members of the graduate faculty, which includes at least three faculty members from the Department of Anthropology. The dissertation adviser must be a member of the doctoral committee. The dissertation adviser usually serves as chair, but this is not required. If the student is also pursuing a dual-title field of study, a co-chair representing the dual-title field must be appointed. In most cases, the same individual (e.g., dissertation adviser) is a member of the graduate faculty in both the major and dual-title fields, and in such cases may serve as sole chair.

At least one regular member of the doctoral committee must represent a field outside the student's major field of study in order to provide a broader range of disciplinary perspectives and expertise within the committee. This committee member is referred to as the "Outside Field Member." In cases where the student is also pursuing a dual-title field of study, the dual-title representative to the committee may serve as the Outside Field Member.

Additionally, the primary appointment of at least one regular member of the doctoral committee must be in an administrative unit that is outside the unit in which the dissertation adviser's primary appointment is held (i.e., the adviser's administrative home; in the case of tenure-line faculty, this is the individual's tenure home), in order to avoid potential conflicts of interest. This committee member is referred to as the "Outside Unit Member." In the case of co-advisers, the Outside Unit Member must be from outside the administrative home(s) of both co-advisers. In some cases, an individual may have a primary appointment outside the administrative home of the student's dissertation adviser and also represent a field outside the student's major field of study; in such cases, the same individual may serve as both the Outside Field Member and the Outside Unit Member.

If the student has a minor or is pursuing a dual-title field of study, committee members representing these options should be added at the time of the committee formation.

A person who is not a member of the graduate faculty (and may not be affiliated with Penn State), but who is otherwise qualified and has particular expertise in the student's research area, may be added as a "Special Member," upon recommendation by the head of the graduate program and approval of the Graduate School dean (via the Office of Graduate Enrollment Services). A Special Member is expected to participate fully in the functions.

If the student has a minor, that field must be represented on the committee by a "Minor Field Member."

No faculty member is obliged to sit on any committee and any faculty member has the privilege of resigning from any committee at will. It benefits students to make themselves and their research plans known to as many of the faculty as possible in order to ensure that willing committee members are available. In short, it is the student's responsibility to cultivate enthusiasm about, and support for, the research project.

Students should be aware that the overall quality of participation on their part in the departmental program (viewed in its broadest sense) is essential in establishing good working relations with the faculty. Failure to achieve or maintain a favorable record of participation may eventually result in

a situation in which no properly constituted committee can be formed or maintained. A student who cannot form a functioning committee will be dismissed from the program.

It is the student's responsibility to convene his or her committee at whatever times are deemed necessary by the student and the committee chair. It is particularly important that such a meeting be arranged by the end of the semester in which the committee is formed so that areas of responsibility for each faculty member for the comprehensive examination may be determined.

The following is taken from the university's Graduate Student Policies and Procedures:

“The doctoral committee should meet with the student *at least once per year* to (1) provide guidance, (2) finalize and approve the research proposal of the student so that there is a clear understanding of the research goals and objectives, (3) assess the quality and progress of the research, and (4) discuss programmatic issues (e.g., course requirements).”

Residency and Registration Requirement

The Graduate School requires that for some twelve-month period between admission to the Ph.D. program and completing the program, you be registered as a full-time student for two semesters (not counting summer sessions) at the University Park campus, the Penn State Milton S. Hershey Medical Center, or Penn State Harrisburg.

The department requires course work appropriate to preparation for the comprehensive examination and for dissertation research. Students should work closely with the doctoral committee, especially the chair, to ensure that appropriate courses are taken in a timely fashion. Post-comprehensive exam students generally enroll in ANTH 601 for fall and spring semesters. Students are required to be enrolled in the university each semester from the comprehensive exam through graduation. By University rule the maximum course load is 601, plus one three-credit course. Should a student on department or University funding wish or be required to enroll in any course other than, or in addition to, 601, the student must obtain prior approval from the department head.

Comprehensive Examination/Proposal Defense

The comprehensive exam consists of a written proposal and an oral defense of the proposal. This “exam” determines the student's readiness to conduct doctoral research in their area of specialty. Students should schedule the proposal defense by the end of their second or beginning of their third year of study. A final version of the dissertation proposal must be circulated by the student to all committee members at least three weeks in advance of the defense. No examination will be administered until the dissertation committee is satisfied with the proposal.

The proposal defense is scheduled and announced officially by the Office of Graduate Enrollment Services upon recommendation of the program head. Two weeks' notice is required by the Graduate School for scheduling this defense, which may be open to the public at the department's discretion. Three weeks advance notice to the graduate program assistant and notification of and the reason for any absentee members is requested. It is

mandatory that the student and the chair (or one of the co-chairs) are physically present at the defense, which is evaluated by the entire doctoral committee.

The “exam” consists of a written component (the research proposal), an oral presentation of the research proposal, followed by an oral question and answer session. A favorable vote of at least two-thirds of the members of the committee is required for passing. In case of failure, it is the responsibility of the doctoral committee to determine whether the candidate may continue in the program and try again to defend the proposed research. The results are reported to the Office of Graduate Programs and entered on the candidate’s official record.

Standard of Progress

We only admit students who we believe have the ability and interest to be successful in our program. However, in order to establish due progress, fairness, and efficient use of departmental faculty and financial resources, we have a standard schedule for adequate progress in our graduate program. In order to maintain good standing and continued funding in the program, students must satisfy this standard. In general, this means the student must:

1. Attain candidacy no later than the beginning of the third semester.
2. Identify a doctoral research project, produce a written proposal, and form a formal doctoral committee no later than the beginning of the 5th semester.
3. Pass the comprehensive exam/proposal defense no later than the end of the 5th semester.
4. Complete research and be awarded the Ph.D. no later than the 10th semester.

Remaining in the program and continuing to receive the financial aid stipulated in the student’s letter of admission to the program are contingent on fulfilling this schedule in a satisfactory way, according to the following details (and the program description as given in this Handbook).

As a basic condition of acceptable progress, it is the student’s responsibility to meet with their advisor, to determine their academic schedules each semester and to follow the advice given.

- A. A student having been admitted to candidacy must:
 1. Complete ANTH 509 (with a grade of B or better) by the end of their third semester.
 2. Assemble a full committee including at least one member from outside the department, and three within, at least one of whom agrees to serve as chair by the end of their 4th semester. If there is a minor or dual-title, there must be a representative from that program on your official committee.
 3. Complete two concurrent semesters (summer sessions not included) of full-time study within a twelve month period to fulfill the University residency requirement.
 4. Complete all required coursework by the end of the 4th semester.
 5. Complete and defend a doctoral dissertation proposal (comprehensive exam) during the 4th or 5th semesters. After passing this exam, students are considered to have ABD (all but dissertation) standing. In case of failure, it is the responsibility of the doctoral committee to determine whether the candidate may continue in the program and try again to defend the proposed research.
 6. Complete the SARI requirement by the end of their 4th semester.

7. The timing of the comprehensive examination/proposal defense can be altered, in particular where due progress is interrupted by field or other research work related to the student's education and project, and with the *explicit written* approval of the Graduate Studies Committee. However, financial aid may be suspended during this suspension of the progress clock. Such delayed arrangements are *ad hoc* and must be worked out with the student's main advisor and formally petitioned to the Graduate Studies Committee.
8. University rules apply to the time within which ABD students must finish and defend their dissertation. The department often provides desk space, laboratory and other resources, and even some types of financial aid, to ABD students while they do their dissertation research. We do our best to accommodate students, and there are opportunities in the department (such as the Hill fund or faculty research grants) as well as external grant sources to which students can apply. But there is no obligation on the department's part to provide such resources, nor to continue to provide financial support, beyond the stipulation in the original letter of admission.
9. In all cases, the student must make acceptable progress in order to retain funding. This includes satisfactory teaching assistantship or research assistantship performance; maintenance of a viable committee, etc. Failure to have an adequate evaluation in the spring, or if negative issues arise earlier, may lead to termination of funding as decided by the Graduate Studies Committee.

B. Students studying in our department but obtaining degrees in other programs:

We train a number of students who work with our faculty as their main advisors, physically in our department, but who are technically obtaining degrees in other subjects, such as through our IBIOS, Demography, Ecology, Genetics, or other programs. So long as the students are working in our department, rather than as occasional visitors, they may be awarded financial support from the department. But continued support is contingent on similar conditions of satisfactory performance and/or needs of the program, as apply to our regular students. Such students are also required to enroll in (during pre-comprehensive semesters) and attend our current-research journal club seminars. Students on departmental aid will be given an annual performance review and must show due progress in order to retain support from our program. These students are eligible to apply for internal research or travel support grants from the department, based on the quality of their work.

Exceptions and special conditions:

This Standard of Progress is intended as a positive way to help our students move through the program, enabling resources to be allocated productively and fairly. The standards have proven effective for successful students who have gone on to careers in the field.

Individual circumstances may lead to justifiable exceptions to this Standard of Progress, especially given the diversity of anthropological and related research. Students may petition to the Graduate Studies Committee for waivers or exceptions to the Standard, but it is the student's responsibility to initiate any such petition. Substantial justification must be provided, and the faculty generally will be sympathetic to reasons involving personal problems beyond the student's control or

unusual opportunities for field work, training, or research experience elsewhere, and the like. But students need to be aware that the Graduate Studies Committee is under no obligation to consider or grant requests for exceptions or to grant exceptions under time or other pressures. To the extent they are able, students should anticipate their intention to request exceptions by appealing to the Graduate Studies Committee in a timely fashion (at least 30 days) for the members to make a considered decision.

Dissertation

The Ph.D. dissertation is intended to be a demonstration of the ability to plan and execute a research program/project, and to present the results in a form consistent with the professional standards of the student's special field of research. Although the process is carried out under the supervision of the doctoral committee, initiative, independence, and originality are expected from the student.

Any research projects that students undertake that involve the use of animal or human subjects, or individual records of events related to human subjects, necessitates obtaining permission to carry out that research from the Committee for the Protection of Human Subjects and/or the Animal Care and Use Committee, as appropriate. Institutional Biosafety Committee approvals are required for investigations involving biohazardous materials. Likewise, chemical waste disposal guidelines must be followed. There are standard forms and procedures for these approval processes. The procedures are not painful, but they are absolutely essential since they are mandated by University policy and, in certain circumstances, by Federal law.

This procedure applies to any project. Archaeology projects should be included, for example, to assure that the rights of the living are not being infringed upon or compromised. Historical research (use of demographic, medical, school, other personal records) is definitely included. Any kind of survey, interview, observation, or other study involving participation is also included.

It is the responsibility of the student to ascertain whether his or her research requires human subjects. This is part of the normal ethics of research at Penn State and every other institution and is a formal requirement for research. Failing to comply is a serious offense and can lead to very serious penalties.

An option for the dissertation is to submit three published articles on the topic of your dissertation research. This usually entails an introductory and a concluding essay to situate the articles for your committee. You will negotiate the exact details of the nature of the articles, the journals they should be in, and the introductory and concluding essays with your adviser and committee. If the articles are not yet published, they can be submitted if the committee agrees that they are publishable.

Dissertation Progress

The doctoral committee may, at its discretion, set time limits for various stages of the research and for submission of drafts of the dissertation following successful conclusion of the comprehensive examination. The student should expect to work closely with his or her committee chair through

all stages of the work, and he or she should arrange regular conferences with the adviser, as well as with other members of the committee who may be able to give guidance in specific aspects of either research or writing. Students should be especially conscientious about maintaining adequate contact with non-departmental members of their committee, both because these people usually have special areas of expertise not duplicated in the department and because it is important to maintain satisfactory relationships with external scholars for the good of the graduate program as a whole. External committee members also have the responsibility to monitor the fairness of the evaluation process including examinations and defenses. In short, the committee exists for two reasons: to assist the student and to evaluate the outcome of the research effort.

Final Draft and Oral Defense

An examination in defense of the dissertation is scheduled with the approval of the committee chair. The timing of this examination should be such that final changes in the dissertation that may result can be incorporated, and the dissertation submitted to the Thesis Office, before graduation deadlines.

It is the responsibility of the doctoral candidate to provide a complete and clean copy of the dissertation to each member of the doctoral committee at least one month before the date of the scheduled examination. The following is from the University's Graduate Student Committee Policies and Procedures:

“Both the chair and the student are responsible for ensuring the completion of a final draft of the dissertation, and for adequate consultation with members of the doctoral committee, well in advance of the final oral examination. Major revisions of the dissertation should be completed before this examination. The dissertation should be complete and in its “final” form, with correct and polished content and style, appropriate notes, bibliography, tables, etc., at the time it is distributed to the committee members. If committee members find that the draft submitted to them is not in this form, the chair is notified and postponement of the examination is considered.”

The final oral defense consists of two parts. First, the doctoral candidate presents a public lecture of about an hour, which includes time for questions from the audience. Second, the doctoral committee conducts an extended and detailed examination of the candidate in private.

The oral defense can be postponed if adequate consultation has not occurred or if the dissertation is not in the final draft form. The need to begin a position of employment at a prearranged date will not be considered a legitimate reason to circumvent this process. It is the responsibility of the student to factor in the fulfillment of the degree requirements when negotiating a contract to begin a new position.

Students must present their dissertation in accordance with Graduate Council and Graduate School guidelines as described in the Thesis and Dissertation Guide.

M.D/PH.D. DEGREE

Students must fulfill all requirements for each degree in order to be awarded that degree, subject to the double-counting of credits outlined below. Degree requirements for the M.D. program are listed on the [Penn State College of Medicine website](#). For students enrolled in the joint degree program, the requirement for ANTH 572 and 573 will be waived, and students will be required to complete 2 credits of ANTH 541 instead of 6. The College of Medicine will accept 8 credits of ANTH 600 in lieu of two months of elective rotations (MED 797). In addition, the College of Medicine waives the requirement for a Medical Student Research project for students in the M.D./Ph.D. program.

If students accepted into the joint degree program are unable to complete the M.D. degree, they are still eligible to receive the Ph.D. degree if all the Ph.D. degree requirements have been satisfied.

In addition to the [requirements for the doctoral committee](#) for a Ph.D. student in the ANTH Graduate Program, at least one member of the dissertation committee must be on the M.D./Ph.D. Steering Committee. This member may serve other roles on the doctoral committee.

Degree Requirements

M.D./Ph.D. students must complete 25 credits. Candidates for the M.D./Ph.D. in ANTH will take all of the core courses for the ANTH Ph.D., as well as electives chosen by the ANTH M.D./Ph.D. student in consultation with their primary mentor. In the first semester of the second year at University Park, all students in the ANTH Ph.D. program who have advanced to candidacy are required to take ANTH 509, the research methods seminar. ANTH 508, Anthropological Data Analysis and Visualization, is also required for all ANTH Ph.D. students and may be taken at any point in the first two years. Students without suitable preparation in statistics may also be required to take a course at the 400 or 500 level at the advisor's discretion. At any point during the first two years, M.D./Ph.D. students may be required to take up to 6 additional credits of advanced seminars, as directed by their advisor. The M.D./Ph.D. students pursuing the ANTH Ph.D. are also required to enroll in a one-unit literature review seminar (ANTH 541) for one credit each semester during the first two semesters of study. All entering graduate students are expected to complete online training in Scholarship and Research Integrity (SARI), also referred to as Responsible Conduct of Research (RCR), by no later than October 1 of their first semester in residence at University Park. In addition to taking the required core courses and the literature review course, six credits of elective courses may be required in consultation with the student's dissertation adviser and doctoral committee. Eight credits of ANTH 600/601 Thesis Research/Ph.D. Dissertation conducted over the four years of the graduate portion of the training program will be counted by the College of Medicine in lieu of two months of elective rotations (MED 797). The College of Medicine's requirement for a Medical Student Research project is also waived for all M.D./Ph.D. in ANTH candidates.

Doctoral Committee

The doctoral committee of an M.D./Ph.D. student in ANTH will be formed upon successful passing of the ANTH candidacy examination and commencement of work under a primary mentor,

no later than the end of the first semester of the second year of graduate study at University Park. The doctoral committee must include a minimum of four faculty members, i.e., the chair and at least three additional members, all of whom must be members of the Graduate Faculty. The committee must include at least two members of the ANTH graduate faculty and one member of the M.D./Ph.D. steering committee. One member of the doctoral committee must represent a field outside the candidate's major field of study in order to provide a broader range of disciplinary perspectives and expertise. This person is the "outside field member." Additionally, one member of the committee must be an "outside unit member:" a member of the graduate faculty outside the adviser's administrative home (for a tenure-line faculty member this is the department that serves as their tenure home). The same person can be the outside field member and outside unit member.

Comprehensive Examination

The comprehensive examination for ANTH M.D./Ph.D. students will follow the same guidelines as for Ph.D. students in ANTH, except that the comprehensive examination must be held before the end of the second academic year at University Park. The M.D./Ph.D. student must write a dissertation proposal in preparation for the comprehensive exam, and a final version of the dissertation proposal must be circulated by the student to all committee members at least four weeks in advance of the comprehensive exam. The comprehensive examination for M.D./Ph.D. students will be an oral examination, scheduled with the Graduate School at least two weeks ahead of time, which may be open to the public. The examination will consist of a student presentation of their dissertation proposal, followed by questions and discussion. The student and the chair (or one of the co-chairs) is physically present at the exam, which is given and evaluated by the entire doctoral committee. A favorable vote of at least two-thirds of the members of the committee is required for passing. In case of failure, it is the responsibility of the doctoral committee to determine whether the candidate may take another examination. The results are reported to the Office of Graduate Enrollment Services and are entered on the candidate's official record.

Dissertation

The dissertation requirements for ANTH Ph.D. and ANTH M.D./Ph.D. students are the same: All Ph.D. candidates must conduct original research and prepare a dissertation that makes a significant contribution of new knowledge, is presented in a scholarly manner, and demonstrates an ability on the part of the candidate to do independent research of high quality. The contents and conclusions of the dissertation must be defended at the time of the final oral examination.

Students must present their dissertation in accordance with Graduate Council and Graduate School guidelines as described in the Thesis and Dissertation Guide.

Dissertation Progress

The doctoral committee may, at its discretion, set time limits for various stages of the research and for submission of drafts of the dissertation following successful conclusion of the comprehensive examination. The student should expect to work closely with his or her committee chair through all stages of the work, and he or she should arrange regular conferences with the adviser, as well as with other members of the committee who may be able to give guidance in specific aspects of

either research or writing. Students should be especially conscientious about maintaining adequate contact with non-departmental members of their committee, both because these people usually have special areas of expertise not duplicated in the department and because it is important to maintain satisfactory relationships with external scholars for the good of the graduate program as a whole. External committee members also have the responsibility to monitor the fairness of the evaluation process including examinations and defenses. In short, the committee exists for two reasons: to assist the student and to evaluate the outcome of the research effort.

Final Draft and Oral Defense

An examination in defense of the dissertation is scheduled with the approval of the committee chair. The timing of this examination should be such that final changes in the dissertation that may result can be incorporated, and the dissertation submitted to the Thesis Office, before graduation deadlines.

It is the responsibility of the doctoral candidate to provide a complete and clean copy of the dissertation to each member of the doctoral committee at least one month before the date of the scheduled examination. The following is from the University's Graduate Student Committee Policies and Procedures:

“Both the chair and the student are responsible for ensuring the completion of a final draft of the dissertation, and for adequate consultation with members of the doctoral committee, well in advance of the final oral examination. Major revisions of the dissertation should be completed before this examination. The dissertation should be complete and in its “final” form, with correct and polished content and style, appropriate notes, bibliography, tables, etc., at the time it is distributed to the committee members. If committee members find that the draft submitted to them is not in this form, the chair is notified, and postponement of the examination is considered.”

The final oral defense consists of two parts. First, the doctoral candidate presents a public lecture of about an hour, which includes time for questions from the audience. Second, the doctoral committee conducts an extended and detailed examination of the candidate in private.

The oral defense can be postponed if adequate consultation has not occurred or if the dissertation is not in the final draft form. The need to begin a position of employment at a prearranged date will not be considered a legitimate reason to circumvent this process. It is the responsibility of the student to factor in the fulfillment of the degree requirements when negotiating a contract to begin a new position.

Students must present their dissertation in accordance with Graduate Council and Graduate School guidelines as described in the Thesis and Dissertation Guide.

DUAL-TITLE DEGREE PROGRAMS

Anthropology is an interdisciplinary field, so we are pleased that students have the option of enrolling in dual-title graduate programs in Demography, Human Dimensions of Natural

Resources and the Environment (HNDRE), and Bioethics.

Dual degrees are to be integrated into the student's plan of study, allowing the student to work on both degrees at the same time. The dual-title program will be added to a student's official record early on in the student's graduate program and integrated into the student's doctoral exams, including the candidacy examination. Typically, Graduate Enrollment Services receives a memo requesting that the dual-title be added to the student's record within the first or second semester of admission to the major program or the student is admitted to the dual-title program via the Candidacy Report form.

For further and up-to-date details, see the Department of Anthropology website and program websites listed below.

M.A. and Ph.D. in Anthropology and Demography

The Demography interdisciplinary program is designed to give students in-depth knowledge of the demographic dimensions of anthropological research, including studies of present populations as well as those of the past.

<http://www.pop.psu.edu/demography>

M.A. and Ph.D. in Anthropology and Human Dimensions of Natural Resources and the Environment (HDNRE)

The HDNRE program, which involves four colleges including the College of the Liberal Arts, is oriented toward research that furthers our understanding of the human use of natural resources, a pressing concern for all of us in the twenty-first century. Topics of special concern for anthropologists are the (very) long-term impact of humans on natural settings, and the ways people have adapted to those changes in their surroundings.

<http://agsci.psu.edu/graduatestudents/hdnre/about>

Ph.D. in Anthropology and Bioethics

The Bioethics program provides anthropology students with an opportunity to develop their knowledge of the social and ethical implications of their research. This combination – solid research experience and an intimate knowledge of the ethical dimensions of that work – is increasingly important in the workplace and broadens the possibilities of employment beyond traditional anthropology positions.

<http://bioethics.la.psu.edu/graduate/brochure.pdf>

GRADUATE MINOR

A doctoral minor consists of integrated or articulated work in one field related to, but different from, that of the major. At least one member of the minor field must be on the candidate's doctoral committee. As such, approval for and addition of an intended minor should be pursued early in a doctoral student's program (prior to the comprehensive examination) in order to ensure that the intended minor is appropriate, its integration/articulation with the major field can be rationalized, and that the doctoral committee member representing the minor field is an active participant in all aspects of the committee's efforts to inform the student's program and dissertation research.

To add a doctoral minor to your program, complete the form that can be found online at: <http://gradschool.psu.edu/current-students/> and provide a copy to the graduate program assistant so it can be added to your department graduate file.

GRADUATE FINANCIAL SUPPORT

Several types of financial support are available, including teaching assistantships; graduate fellowships; graduate work study programs; research assistantships funded by grants to individual faculty members; and teaching opportunities at other Penn State campuses, in Continuing Education, and through Penn State World Campus.

In addition to the information below, students are urged to consult the Graduate School website on Types of Graduate Support at: <http://gradschool.psu.edu/graduate-funding/funding/>

Satisfying requirements for due progress and acceptable performance of duties is a condition for continued financial support.

Graduate Assistantship Policy

The graduate assistantship program provides aid to the department and financial support plus professional training to the student. In pursuit of these dual goals, the graduate assistant should remember that he or she represents the University with the responsibility to perform those duties prescribed by the University and the department. The department and the assistant's supervisor should, on the other hand, specify duties which will ensure that the graduate assistant has the opportunity to increase and utilize his or her knowledge, skills, and competencies. All students are required to fulfill his or her duties through the end date of the appointment, which includes all of exam week.

Admission to the program carries no commitment of support beyond the terms indicated in the admissions letter. Students with multi-year offers of support must maintain satisfactory academic progress to continue receiving support. Students admitted with no financial aid or one-year offers may or may not receive financial aid in the future. The following comments about funding pertain to support received from the department, not funds obtained by individual faculty members who control their disbursement (e.g., NSF grants).

Continued funding for any given year is based on satisfactory performance. For second-year funding, students are required to have received a satisfactory annual evaluation by the faculty. This includes having obtained a grade point average of 3.3 or better, passed core courses at a "B" or better, and performed their assistantship duties satisfactorily. For third-year funding, students need to pass the candidacy exam; perform all graduate duties, including assistantships, satisfactorily; and identify the departmental core of a Ph.D. committee, including the committee chair. Similarly, in future years, funding depends on having a dissertation committee and having performed adequately in assistantships. A deferred grade in any course or a leave of absence will jeopardize funding.

In effect, the 3.3 grade point rule applies throughout the graduate career for support eligibility, with the exception of support that is disbursed by particular faculty members (on grants, etc.).

Students who do not have a commitment for funding for the next academic year must inform the head of the department by March 1 of their interest in being considered for funding during the coming year. Notifying the head does not guarantee funding.

A student who changes specialty must reapply for funding. Prior funding commitments will not necessarily be continued.

Assistantship Evaluation

A student who has been awarded a graduate assistantship will be evaluated in writing by the faculty member who supervises the student. Forms for graduate assistant evaluations are distributed at the end of each semester by the graduate program assistant. These evaluations are reviewed by the DGS and will be kept in the student's permanent record. Performance evaluations serve as a basis for assessing eligibility for future assistantships. Evidence of insufficient academic progress may result in loss of assistantship support.

Assistantship Assignments

The needs of the department are of primary importance when assigning assistantships. Assignments are generally governed by the specific areas of interest shown by the student. For example, if the student is interested in a research career in biological anthropology, an attempt will be made to assign him or her to a professor in this area. The student is encouraged to state his or her specific area of interest so that this factor may be considered. The requirements of the department, however, supersede all other considerations.

The graduate assistant will generally be assigned to a single professor who will act as his or her supervisor and delegate the specific duties. However, when the need arises, the supervisor may assign the assistant to perform tasks for another department member. If asked to perform tasks by a department member other than his or her supervisor, the assistant should, if possible, first inform his or her supervisor. If the supervisor is not available, the assistant will perform the required task and subsequently inform his or her supervisor concerning the nature of, and time spent in, these duties.

Assistantship Duties

The duties of the graduate assistant are broad and will generally be governed by whatever assignment the supervisor makes. Graduate assistants may only be absent from their assistantship duties at the discretion and advanced permission of the instructor. Always check with the instructor before making any travel arrangements that will interfere with your assistantship duties.

While the following outline of duties for graduate assistants is not intended to be complete, it provides a general guide to regular duties. Assistantships are expected to occupy up to twenty

hours per week (half-time), though this can vary because these are professional, rather than hourly, assignments. The assistant may be required to perform work in four major areas:

1. Teaching:

The graduate assistant may be utilized in many aspects of teaching, from assisting in the preparation and grading of exams to teaching an introductory course for which he or she is qualified. (The student should have an M.A. degree to serve as sole instructor of record). He or she may be required to serve as an adviser to students on course content. It is expected that the assistant will attend those courses for which he or she performs the above duties, unless excused by the supervisor. The graduate assistant occasionally may be asked to lecture to a class with or without the professor in attendance. The assistant may also serve as a discussion leader for certain classes.

2. Research:

Research serves as an important aspect of any academic discipline and the assistant may perform a wide variety of duties in aiding the supervisor in this area. No specific limits can be set except that the work should be related to a discipline within the department, and that the assistant should have an opportunity to learn in the performance of the duties.

3. Museum:

The specific duties will be assigned by the museum director or curator. These duties may include cataloging artifacts and other display items, exhibit preparation, supervision of tours and daily operations, etc. All students receiving assistantships may be called upon to work in the museum during the semester of the assistantship.

4. Undergraduate Research:

Graduate students assigned to supervise undergraduate research are expected to work closely with both undergraduates and other individuals (normally faculty) who provide opportunities for specialized training on research or museum-related projects. This position requires initiative, independence, and cooperation with other students and faculty alike. Students are involved for the most part in projects within their specialty.

Paul T. Baker Research Travel Fund in Human Biology and Anthropology

The Paul T. Baker Research Travel Fund (Baker Fund) is designed to promote research and travel to professional meetings by graduate students in the biological anthropology program. Funds are awarded on a competitive basis. In general, doctoral research takes precedence over pilot studies and travel to professional meetings to present papers. Students should note that there are separate guidelines and applications for research and travel funds.

Hill Fellowship Award

The Hill Fellowship Award is an annual source of research support for senior graduate students. Funds from this endowment are used to support graduate students who are engaged in dissertation research, usually involving fieldwork. A student interested in applying for a Hill Fellowship should consult his or her committee chair or the DGS. The application should follow the format of an NSF Doctoral Dissertation Improvement Proposal. Decisions on who receives funding will be made

each spring at a meeting of the Graduate Studies Committee. There are two levels of Hill awards: 1) small grants awarded prior to the completion of the comprehensive examination to explore the feasibility of research for the doctoral dissertation, and 2) regular grants intended to support approved dissertation research after the comprehensive examination has been completed. Release of funding as part of a regular award is usually contingent upon successful completion of all phases of the doctoral program excluding the dissertation itself (ABD status). The student is required to submit the proposal to NSF or some other suitable funding agency or organization as a requirement for receiving a Hill Fellowship.

ACADEMIC INTEGRITY

All Penn State policies regarding ethics and honorable behavior apply to the Department of Anthropology as well. For any material or ideas obtained from other sources, including but not limited to books or online sources, a source reference must be given. You must not plagiarize; that is, you must not appropriate the writing of others and present it without attribution as your own. For more information on academic integrity, please visit <http://www.la.psu.edu/current-students/student-services/academic-integrity/academic-integrity>. All student material will be checked for plagiarism and collusion on www.turnitin.com.

Furthermore, all exam answers must be your own, and you must not provide any assistance to other students in exams. Students violating these simple policies will receive a failing course grade, and the issue will be pursued further under the University's regulations concerning academic integrity.

Penn State defines academic integrity as the pursuit of scholarly activity in an open, honest and responsible manner. All students should act with personal integrity; respect other students' dignity, rights, and property; and help create and maintain an environment in which all can succeed through the fruits of their efforts (Faculty Senate Policy 49-20). Dishonesty of any kind will not be tolerated in the program. *Dishonesty includes, but is not limited to, cheating, plagiarizing, fabricating information or citations, facilitating acts of academic dishonesty by others, having unauthorized possession of examinations, submitting work of another person or work previously used without informing the instructor, or tampering with the academic work of other students.* Students who are found to be dishonest will receive academic sanctions and will be reported to the University's Office of Judicial Affairs for possible further disciplinary sanctions.

Penn State's Academic Integrity Policy 49-20 can be found online at <http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-and-49-00-grades/#49-20>

GRADING

Students should be familiar with the Graduate School policy on grading as outlined in The Graduate Bulletin at http://bulletins.psu.edu/bulletins/whitebook/academic_procedures.cfm?section=procedures6.

At the 400, 500, and 600 levels, grades of A, B, and C denote graduate credit, whereas D and F are failing grades for graduate students. A grade of F indicates doubt in the judgment of the instructor of the student's potential for further graduate study.

A minimum grade point average of 3.00 for work done at the University is required for continued funding, doctoral candidacy, admission to the comprehensive examination and final oral examination, and graduation.

When a student's grade-point average for any semester falls below 3.00, he or she should consult with his or her adviser immediately. A student whose grade-point average drops below 3.00 for each of two consecutive semesters is normally dropped from the program. The Graduate Bulletin states under Unsatisfactory Scholarship, "A graduate student who fails to maintain satisfactory scholarship or to make acceptable progress in a degree program will be dropped from the University. One or more failing grades or a cumulative grade-point average below 3.00 for any semester or session or combination of semesters and/or sessions may be considered as evidence of failure to maintain satisfactory scholarship. Action may be initiated by the department or committee in charge of the graduate major or by the chair of the student's doctoral committee.

DEFERRED GRADES

In accordance with Graduate School procedures, the following policies pertain to deferred grades.

If work is incomplete at the end of a semester because of extenuating circumstances, the instructor may report DF in place of a grade, which will appear temporarily on the student's record. It is not appropriate to use the DF either casually or routinely to extend a course beyond the end of the semester or to extend a course for a student who has failed so that the individual can do extra work to improve the grade. The DF must be removed (i.e., the course must be completed) within twenty-five weeks after the course end date, with two possible exceptions: (a) a completion deadline longer than twenty-five weeks may have been previously agreed upon by the instructor and student, with a memo on the agreement having been sent to the Office of Graduate Enrollment Services, 114 Kern Building, for inclusion in the student's file; or (b) as the twenty-five week deadline nears, it may become evident that an extension is warranted. The instructor then sends a request for an extension (to a specified date) to the dean in the Office of Graduate Enrollment Services, with a justifying statement.

No deferred or missing grade may remain on the record at those times when a student reaches an academic benchmark. Benchmarks include completion of a master's program and the doctoral candidacy, comprehensive, and final oral examinations. Graduate programs may add additional benchmarks.

There are only three circumstances under which a course grade, once assigned, can be changed:

1. If there was a calculation or recording error on the instructor's part in the original grade assignment (Senate Policy 48-30);
2. If it is a course for which an R grade has been approved and in which an initial R can be assigned and changed later to a quality grade; and

3. If, as discussed above, a DF was assigned and the deadline for course completion has not yet passed.

GRADUATE STUDENT AUDITS

As mandated by the faculty, the Graduate Studies Committee conducts an audit during the spring semester of each year that compares information from each student's file with the above model of adequate progress. The audit is designed to assure that the Standard of Progress is being followed and to address any deficiencies. A letter summarizing the yearly audit is sent to each student and copied to the adviser, and a copy is placed in each student's file. A student is responsible for checking this information for inaccuracies or omissions, for discussing the results with his or her adviser, and, if necessary, for bringing problems before the Graduate Studies Committee.

The careers of particular students may depart significantly from the normal graduate trajectory for valid reasons (e.g., prior experience, field work opportunities). With adequate justification and documentation, these departures can be routinely accounted for in the audit with no prejudice against the student. However, a student who departs from the model of normal progress, without valid reasons, as certified by his or her adviser and the Graduate Studies Committee, may be judged to be failing to make satisfactory progress. Funding in subsequent years is contingent upon satisfactory progress as outlined above.

INTERNATIONAL TRAVEL POLICY

The University International Travel Requirements Policy applies to all University employees, students, and authorized volunteers travelling as part of any University-affiliated international travel regardless of the funding source. This includes individual and groups of students participating in for-credit academic study-abroad experiences.

The policy requires that all international travel (other than approved education abroad programs) commencing after July 1, 2016 be registered in the Office of Global Programs' Travel Safety Network (TSN) at least thirty days prior to travel. As part of the travel registration, students are required to attend an Emergency Preparedness Workshop conducted by the Office of Global Programs and obtain the international health and emergency coverage offered through HTH Worldwide prior to departure (see Penn State Travel Policy/Insurance). More information about this insurance and the requirement to provide proof of coverage is located in the TSN database. International travel reimbursement will not be approved without a receipt from the TSN confirming registration, completion of the Emergency Preparedness Workshop and HTH insurance coverage.

Unfamiliarity with international travel requirements will not be considered an acceptable reason for not registering in the TSN, not completing the Emergency Preparedness Workshop and for not having the required HTH travel insurance. University funds will not be approved for any costs associated with travel in such cases.

Questions about the operation or use of the TSN system should be directed to the TSN staff within the Office of Global Programs. The TSN Staff may be reached via email at tsn@psu.edu or phone at 814-863-8788.

LEAVE OF ABSENCE

Circumstances may require the interruption of studies for a period of time, after which a student may wish to return to the program.

Pre-comprehensive exam/proposal defense: In the case of a student who has not yet passed the comprehensive examination/proposal defense, readmission is automatic if the interruption of studies is for two consecutive semesters or less (not including summer sessions), and if the student is in good academic standing (grade-point average of 3.00 or better). The student must file a Resume Study/Change of Graduate Degree or Major form in compliance with Graduate School rules. It is the student's responsibility to notify the Graduate Studies Committee in writing about his or her intent to take a leave of absence. This notification should carry the signature of the student's adviser.

A student who is forced to extend the leave of absence beyond two consecutive semesters will be regarded as a "new student," and the readmission request will be considered along with all other applications submitted for admission at that time. The Graduate Studies Committee can grant a waiver to the student guaranteeing readmission beyond this time limit, however, and any student wishing a waiver should consult with the Graduate Studies Committee before beginning the leave.

Students who take leaves of any length are not guaranteed funding commitments made prior to their departure (e.g. those made upon their entry into the program). The head of the department must be notified by January 15 if a student returning from a leave wishes to be considered for funding. Notifying the head does not guarantee funding.

Post-comprehensive exam/proposal defense: A student who has passed the doctoral comprehensive exam/ proposal defense is obligated by Graduate School rules to register continuously from the time the exam is passed until the doctoral degree is conferred. For further information, see the Graduate Bulletin.

Post-comprehensive/proposal defense Ph.D. students can maintain registration by registering for credits in the usual way, or by registering for noncredit ANTH 601 or 611, depending upon whether they are devoting all or part of their time to dissertation preparation. Students are permitted to register for ANTH 590 (Colloquium), ANTH 602 (Supervised Experience in College Teaching), and audits along with ANTH 601. Students who want to combine course work with thesis preparation must register for ANTH 600 or 611 (i.e., not for 601, which is full-time thesis preparation). The least expensive way for a student to work full time on research and dissertation preparation is to register for ANTH 601. This clearly is the procedure of choice for international students who need to maintain status as full-time students for visa purposes.

CHANGE OF SUBFIELD

A student who wishes to change a subfield within the department after being admitted (both before and after arrival) may be allowed to do so but may have to stay in the same Standard of Progress schedule or petition the Graduate Studies Committee for a waiver. Faculty in the new subfield will treat the request as a new application. The student's prior performance and his or her fit to the new subfield's areas of specialization will be evaluated by the appropriate faculty.

NON-DEGREE STATUS

While the preference is for students to enroll in the regular degree program, it is recognized that non-degree enrollment is sometimes necessary.

Departmental policy on non-degree status is as follows:

1. Non-degree students may enroll in departmental courses in conformity with Graduate School regulations.
2. Non-degree students may apply for regular status (for fall semester admission) at any time they so choose. However, it is recommended that several courses at the 400-level or above be completed with at least three professors in order to provide a basis of judgment for admission. However, only fifteen of the credits may be counted toward the M.A. degree (see the Graduate Bulletin).
3. Admission of non-degree students to regular status requires the approval of both the faculty in the student's specialty and the Graduate Studies Committee.
4. Applications from non-degree students will be judged at the same time and by the same criteria as applications from students having the same background at other institutions. These criteria include complete academic records, Graduate Record Exam scores, and faculty recommendations. In itself, classroom performance as a non-degree student is not sufficient to guarantee admission as a regular student.

Appendix A

Scholarship and Research Integrity (SARI) Program Plan Department of Anthropology College of the Liberal Arts

Part 1: Collaborative IRB Training Initiative (CITI) Online Responsible Conduct of Research (RCR) Training Program.

- A. How students will be made aware of the requirement: The following statement will be added to the Department of Anthropology Graduate Handbook.

“All entering graduate students are expected to complete online training in Scholarship and Research Integrity (SARI) by no later than October 1 of their first semester in residence. The Office for Research Protections (ORP) provides the link to this training via the SARI Resource Portal on the ORP web site (www.research.psu.edu/orp). All students will be expected to complete all remaining SARI requirements during the M.A. portion of the Ph.D. program (the first two years) and their third year of study.”

Students will also be made aware of the requirement during the mandatory briefing that precedes the fall semester of their first year of study.

- B. Expected date of completion: Graduate students will be required to complete the online RCR training program provided by the Collaborative Institutional Training Initiative (CITI) by October 1 of their first year of study. Students will be expected to complete other portions of the requirement during each of their first six semesters in the program and to have finished with them at the end of that period.
- C. Student participation will be monitored by means of our formal annual spring semester evaluation and on their transcripts.

Part 2: Five hours of discussion-based RCR education:

- A. Type of program(s) to be offered (e.g. workshop, seminar series, credit offering, ORP workshop, etc.) and frequency of offering: The required RCR education beyond the online component can be obtained from required coursework, but there are other options that students can explore. All students are required to take a current literature seminar (journal club) during each of at least the first six semesters of study (2 semesters for master's). Each current literature seminar is worth 1 credit and they generally meet once a week for one hour per meeting. A minimum of one class meeting will be dedicated to RCR education in each current literature seminar every semester, providing at least the University-required five hours in this setting. In addition, all Ph.D. students are required to take ANTH 509, the study design course, during the second year of study. A minimum of one class meeting (1 1/2 hours) will be dedicated to RCR education in this course, because ethical issues must be dealt with in research studies. Students can also receive

up to two hours of discussion credit from other RCR-related workshops or credit for participating in classes dedicated to relevant issues, if discussion was involved and they obtain faculty confirmation of their attendance in the class.

- B. RCR topics to be discussed: While general topics span all of anthropology, many of the most important ones are dealt with separately by our sub-disciplines. Biological Anthropology will be concerned primarily with proper materials ownership and transfer procedures, confidentiality of DNA data, confidentiality of computer records of all kinds, issues related to the ownership and permissions associated with proprietary materials, proper informed consent in obtaining and interpreting DNA and other materials such as urine, interviews, etc., proper treatment of animals in the lab and field. Archaeology is mainly concerned with ethical treatment of human remains, stewardship of the archaeological record, ethics in cultural resource management, and other issues covered by the seven ethical standards of the Society for American Archaeology. Demographic and behavioral anthropologists are concerned primarily with informed consent (particularly with non-literate subject individuals), and record confidentiality. An overview of the IRB approval process is also provided as a key component of ANTH 509.
- C. How discussion will be facilitated: All RCR education will take place in the context of seminar sessions in which students participate. Most faculties participate as instructors in courses in which such training can be delivered.
- D. How the needs of doctoral student in the Anthropology program will be met: See the detailed explanation following the topics question above. There are significant sub-disciplinary differences within anthropology. Biological anthropologists deal with physical issues, so the approach there will be similar to biomedical standards. Archaeologists deal with deceased individuals, federal and state statutes such as the Native American Graves Protection and Repatriation Act, and issues that are of concern to descendant communities. Demographers and cultural anthropologists deal with living individuals and their cultures, which in turn entail a very different set of ethical concerns. By dividing our approach between the current literature seminars, we will make sure that all students receive training that is appropriate to their sub-disciplines.

Appendix B

Schreyer Integrated Undergraduate/Graduate Program (IUG)

The Penn State Schreyer Honors College (SHC) offers an Integrated Undergraduate/Graduate Program (IUG) that is designed to enable exceptional undergraduate students enrolled in SHC to complete bachelor's and master's degrees simultaneously in five years. Details of this program, including instructions for applying through SHC, can be found online at www.shc.psu.edu/students/iug/program/.

Students may apply to this program in their fourth, fifth, or sixth semesters of study. Prior to applying, students are expected to have identified a faculty member in the Department of Anthropology who will serve as their graduate mentor and to have discussed their plans with their proposed mentor and with the Department Honors Adviser. To be considered for this IUG program, students must be in good standing in SHC with a minimum cumulative GPA of 3.40.

Application materials must be submitted and reviewed by the Department of Anthropology prior to submission of the completed application packet to SHC. To ensure a timely review of the application prior to the SHC deadlines, students should submit the following materials to the Department of Anthropology no later than the **first Friday** of their fourth, fifth, or sixth semester of study:

- Online Graduate School Application
- Two letters of reference submitted via the online Graduate Application
- Personal statement
- Transcript and Degree Audit
- Current resume or curriculum vita
- Honors Adviser nomination letter
- Research Mentor nomination letter
- Plan of Study (to be completed in consultation with Honors Advisor)
- Thesis Proposal Report (sixth semester students only)

GRE scores are not required. The above application materials will be reviewed by the entire faculty as part of the normal graduate admissions process.

The requirements for the completion of the IUG program include maintaining good standing with SHC, submitting semester reports to the Graduate School each semester, successfully completing all required coursework at both undergraduate and graduate levels, completing a thesis by the end of the fifth year of your undergraduate degree, and following both the Graduate School AND Schreyer Honors Thesis Office deadlines.

Appendix C

Integrated Undergraduate-Graduate (IUG) Program in Anthropology and Classics and Mediterranean Studies (CAMS)

Program Contacts

Kenneth Hirth, Anthropology (kgh2@psu.edu)

Mark Munn, CAMS (markmunn@psu.edu)

Description of the Program

The Integrated Undergraduate/Graduate program (IUG) in Anthropology and Classics and Ancient Mediterranean Studies (CAMS) offers the opportunity for academically superior students to complete a double major bachelor's degree and a master's degree in the course of five years of study. The IUG program will provide archaeology students with the option of identifying their professional interests early in their academic careers and working with faculty to tailor their academic programs to meet their professional and academic goals. It is especially applicable for students who desire professional positions in Cultural Resource Management (CRM) and Heritage Management (HM), or to compete for entry into top-tier doctoral programs in Archaeology, Classics, Ancient Near Eastern studies, Ancient History and Anthropology. The masters (MA) degree is the professional degree in CRM and HM, as well as an advanced degree that will train students interested in pursuing a career in research and university level teaching and provide them with the necessary credentials to compete for admission to highly competitive and top quality doctoral programs.

Because writing skills are crucial in *both* the professional and academic career tracks, the IUG program requires that students complete a formal written thesis. Field experience is also essential, and the program requires two field schools or field experiences, which will enable students to gain the necessary practical excavation, survey, and laboratory experience needed to conduct archaeological research anywhere in the world. The Anthropology-CAMS IUG program is administered by co-directors, one each from Anthropology and CAMS, who are appointed by their respective departments. Co-directors are charged with overseeing and facilitating admissions, and supervising student program content. Students should check departmental websites for the names of program participants.

Program Requirements

The IUG program requires that students integrate undergraduate and graduate level coursework into a 5-year program. This normally consists of completing 90 credits during years 3, 4, and 5 of the program. Students must complete a double major in Anthropology and CAMS as their undergraduate degree. The Anthropology undergraduate major may be a BA in general Anthropology or the BS in Anthropological Science with an option for Archaeological Science. The CAMS undergraduate major must fulfill the requirements for the Ancient Mediterranean Archaeology option. The MA degree consists of 30 additional credits of 400-600 level archaeology courses beyond the undergraduate programs (see MA level Course Requirements below). The scheduling of these courses requires students to construct a Plan of Study as part of the admission process.

At the time of admission and throughout their time in the program, each student will have co-advisors, one from Anthropology and the other from CAMS. Depending on the student's interest, one of these faculty members will serve as the student's primary advisor. Students may petition the program co-directors for changes in advisors as faculty personnel or student interests evolve.

Admission to the Program

Student applicants must be enrolled as a double major, either a CAMS BA and Anthropology BA, or a CAMS BA and Anthropological Science BS. They should have a minimum overall GPA of 3.4 in their majors, and a minimum 3.2 GPA overall at the time of application. Students are admitted based on good progress in their double major, faculty recommendations, a coherent program trajectory, and a high GPA. Students must apply to and meet admission requirements of the Graduate School, as well as the Anthropology graduate program.

Admission is selective based on criteria established by a joint faculty committee from the Departments of Anthropology and CAMS. Students shall be admitted to an IUG program no earlier than the beginning of the third semester of undergraduate study at Penn State (regardless of transfer or AP credits accumulated prior to enrollment) and no later than the end of the second week of the semester preceding the semester of expected conferral of the undergraduate degree, as specified in the proposed IUG plan of study.

Students admitted to the program will be advised by co-advisors, one from each department. The co-advisors approve the student's plan of study and supervise the completion of the written thesis. Each student will have a primary advisor who will work with the co-advisor to ensure successful completion of the degree. The primary advisor must be identified by the student at the time application to the program and must agree to serve in that capacity for the completion of the written thesis.

Plan of Study

Upon admission the student will prepare a detailed plan of study with their advisors, normally for the completion of 90 credits during years 3, 4, and 5 of the program. The plan will be periodically reviewed by the student and advisors and revised as necessary. Each student admitted must complete two of three undergraduate majors: CAMS-BA and ANTH-BA, or CAMS-BA and ANTHSCI-BS. Students must sequence their courses, so all undergraduate degree requirements are fulfilled before taking courses to count towards the graduate degree. If students accepted into the IUG program are unable to complete the M.A. degree, they are still eligible to receive their undergraduate degree if all the undergraduate degree requirements have been satisfied.

At the same time, some graduate coursework will be completed during the fourth year of study, again depending upon course scheduling. The programs are structured in such a way that credits can be "double-counted" for the undergraduate and graduate degrees depending on student interests. Up to 12 credits may be double-counted towards the degree requirements for both the graduate and undergraduate degrees; a minimum of 50% of the double-counted courses must be at the 500 or 800 level. Credits associated with the culminating experience for the graduate degree cannot be double-counted. The courses that are eligible to double count for both degrees are: ANTH 541, ANTH 560, ANTH 571, and ANTH 588.

Tuition Charges and Financial Assistance

Undergraduate tuition rates apply as long as the student is an undergraduate, unless the student receives a graduate assistantship that would require payment of assistantship-rate graduate tuition. Students admitted to the program are eligible to receive partial financial assistance in their fifth year of study if resources are available from participating departments.

Sequence of Courses

Model side-by-side curricular tracks are included in Appendix A. These are hypothetical models and will vary upon when a student is admitted to the program and the structure of their prior coursework. These model programs assume that students will have had one fieldwork experience in archaeology upon admission to the IUG program although this will of course vary from student to student. Students in Anthropology and CAMS regularly get this experience in a variety of ways including participation in approved research projects and by enrolling in Field Schools regularly offered during the summers by Penn State as well as other universities. Students who want to fulfill this option in ways other than using regularly scheduled Penn State Field Schools need to get them approved before attending to ensure that they will count toward completing the fieldwork requirement. There are electives and options available in all tracks so that the programs can be structured for the specific interests of the students.

Graduate Course Requirements for the Master's Degree in Anthropology for the Anthropology-CAMS IUG

Requirements for the Master's Degree: 30 credits

Prescribed Courses: 30 credits

Two credits of ANTH 541 (1) Current Literature in Integrative Anthropology (2 credits)

ANTH 560 (3) Ecology, Evolution, and Human Behavior (3 credits)

ANTH 571 (3) Principles of Human Evolutionary Biology (3 credits)

ANTH 588 (3) Method and Theory in Archaeology (3 credits)

Select three of the following courses for a total of 9 credits:

- ANTH 573 (3) Anthropology Research Practicum (3 credits)
- ANTH 594 (1-15) Research Topics
- ANTH 596 (1-9) Individual Studies
- ANTH 599 (1-12) Foreign Studies
- *CAMS 592 (3) Proseminar (3 credits)
- *CAMS 593 (3-6) Research Seminar (3 credits)
- *CAMS 596 (1-9) Individual Studies (3 credits)

ANTH 494 (1-12) or CAMS 494 (1-12) Research Project (taught jointly between Anthropology and CAMS) (4 credits)

A Master's thesis, including 6 credits of ANTH 600 Thesis Research or scholarly paper, including 6 credits of ANTH 596

Writing Requirement: completion and approval of the thesis to be filed with the Graduate School in the specified appropriate format.

Note: For the foreseeable future (as of spring 2014) CAMS 592 and CAMS 593 will not be offered on a regular basis. Students should discuss with their advisor using CAMS 596 to fulfil this requirement. CAMS 596 is appropriate for students working on Old World research topics for the Anthropology-CAMS IUG when they are taught by archaeologists in CAMS. The appropriateness of these courses needs to be assessed and approved by the student's dual advisers in Anthropology and CAMS.

This Publication is available in alternative media on request.

The Pennsylvania State University is committed to the policy that all persons shall have equal access to programs, facilities, admission, and employment without regard to personal characteristics not related to ability, performance, or qualifications as determined by University policy or by state or federal authorities. It is the policy of the University to maintain an academic and work environment free of discrimination, including harassment. The Pennsylvania State University prohibits discrimination and harassment against any person because of age, ancestry, color, disability or handicap, genetic information, national origin, race, religious creed, sex, sexual orientation, gender identity, or veteran status and retaliation due to the reporting of discrimination or harassment. Discrimination, harassment, or retaliation against faculty, staff, or students will not be tolerated at The Pennsylvania State University.
