

Primate Functional Morphology and Locomotion

Anth 497A – Fall 2009
MWF- 11:15am to 12:05pm
110 Walker

Instructor: **Dr. Tim Ryan** (tmr21@psu.edu)

This course will explore the primate postcranial skeleton and the diversity of primate locomotion.

We will discuss all the different ways primates move, the relationship between the shape and structure of bones and their function, and the evolution of primate locomotion over the last 65 million years.

Pre-requisite: Anth 21,
introductory biology, or consent of
instructor.
